A community meeting is held to discuss how to handle increased reliance on ridesharing.

Community members debate whether they should invest in public transport, let the rideshare continue, or take another action. Despite statistics on traffic and commuting, they feel very uncertain about how this trend will affect their area.

Members break out into groups to explore what the future may hold. They use the simulator to play out their hypotheticals, comparing the implications of their what-ifs.
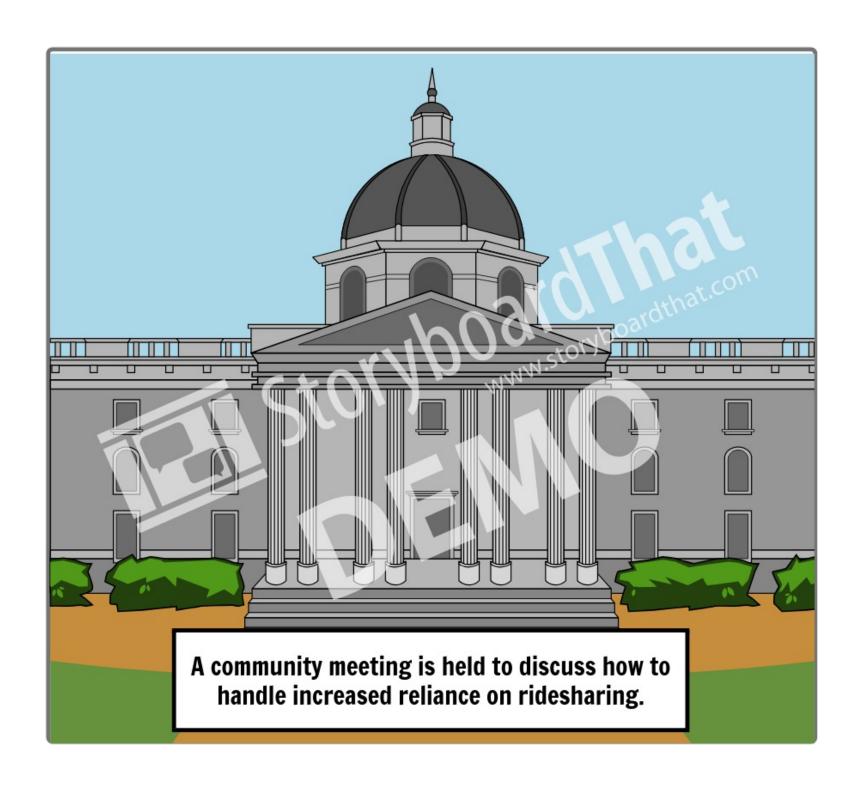

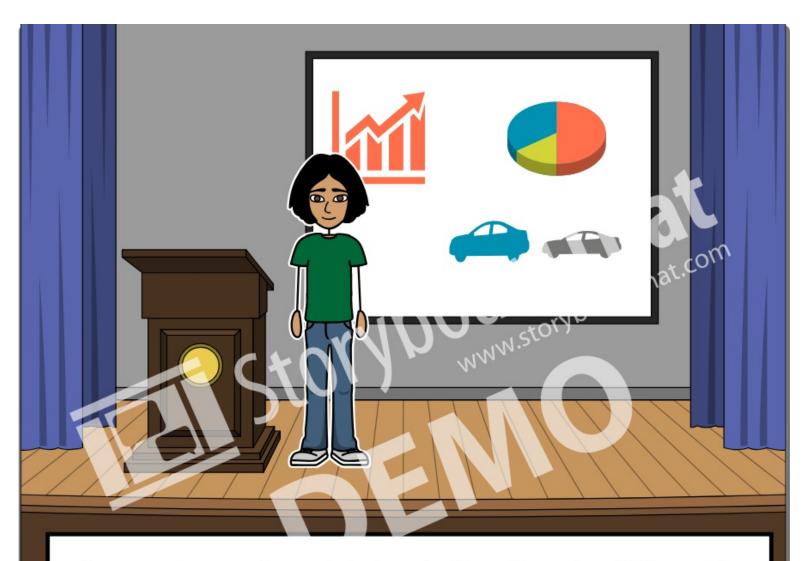

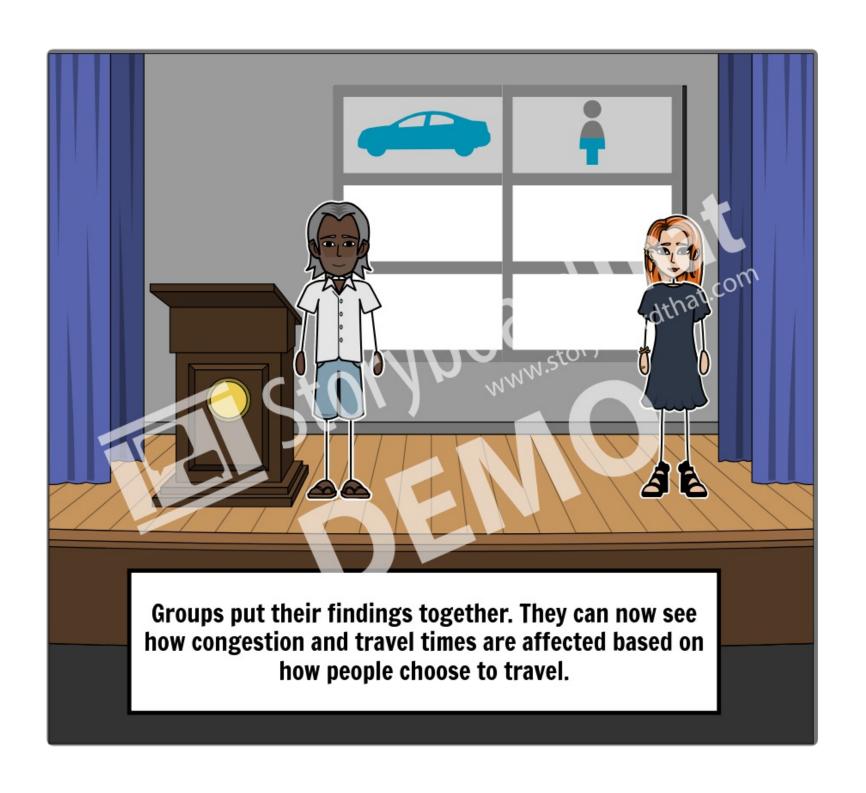

They adjust the simulator settings to best reflect current and possible states of the community. They note particularly interesting patterns and conclusions.

Groups put their findings together. They can now see how congestion and travel times are affected based on how people choose to travel.

Based on the previously presented trends, the community reaches a consensus on what they prioritize and how they wish to proceed.
